

I. INTRODUCTION

Every year flocks of pigeons, sparrows and other pest birds damage billions of dollars worth of property. Their noise, mess and health hazards are a menace to certain parts of our environment. Urban pest birds promote the transmission of several serious diseases, infections and illnesses. Buildings infested with birds pose serious health risks to their occupants and customers. Particular attention should be focused on the areas in and around air conditioning and heating air vent systems which could become contaminated.

The following are only some of the diseases associated with pest birds:

FUNGAL

Histoplasmosis
Candidiasis
Sarcosporidiosis
Blastomycosis

VIRAL

Encephalitis
Meningitis
Newcastle Disease
St. Louis Encephalitis

BACTERIAL

Salmonella
Paratyphoid
Vibriosis
Listeriosis
Pasteurellosis

PROTOZOAL

Toxoplasmosis
Trichomoniasis
American Trypanosomiasis

Bird-B-Gone, Inc. is a company dedicated to solving pest bird problems. The business of Bird control is constantly changing and is loaded with products and services with varied successes. Because Bird-B-Gone is only involved with bird control, it is our business to stay on top of this evolution and provide our customers only the best in products.

Sea World — Disneyland — Unocal Oil — City of Austin — Burger King — Ralph's Supermarkets — Manitoba Hydro — Baldwin Piano — Hewlett Packard — Vons Supermarket — Mondavi Winery and many more

II. IMPORTANT SAFETY INSTRUCTIONS

When installing and using electrical equipment, basic safety precautions should always be followed, including the following:

- 1. READ AND FOLLOW ALL INSTRUCTIONS.**
- 2. WARNING:** Do not place device in or around water. To avoid electrical shock, do not mount unit while standing in water, or if surrounded by water, etc. Even though the control unit and cords are weather resistant, it is not recommended for any use outdoors or any area where water may enter a speaker, the control module or the power pack.
- 3. WARNING:** To reduce the risk of injury, please use earplugs when mounting and testing this unit.
— EAR PLUGS ARE ENCLOSED —
- 4. CAUTION:** Do not mount speaker units where direct exposure to a human ear is within 20 feet for an extended period of time (i.e. where employees will be working for an entire work shift). Ideally, speaker units are located high in the roof or supporting structure at a considerable distance from all personnel. Although the 25 kHz is above human hearing range, the intensity of 112 dB is great enough to present a chance of damage to the ear if directly exposed for an extended period of time at distances of 20 ft. or less.
- 5. SAVE THESE INSTRUCTIONS.** Follow all instructions closely. Any misuse of the product will void all certifications and Bird Chase Ultrasonic System™ Warranty.
