FACILITIES MANAGEMENT MEMORANDUM

TO:

Health & Safety Committee

FROM:

Mark Heffron

(UV)

DATE:

October 26, 1994

RE:

Blodgett Elementary Incident

On Thursday, October 20, 1994, it was reported to my office that a child named Danny Whitehead allegedly had ingested some lag cloth located on a pipe riser in Room 208A (Guidance Office) at Blodgett Elementary.

The child apparently was very irritable and uncontrollable when he began chewing on the pipe riser which is covered with fiberglass insulation and lag cloth.

The school nurse, Ms. Janine Donaghy, R.N., has examined the child for any potential reactions. The nurse also contacted Poison Control and they stated "there was no cause for alarm, but to watch for any irritations of the G.I. tract." The child was also sent to his physician and found to have no problems resulting from this incident.

A manufacturer's Material Safety Data Sheet (M.S.D.S.) of this product is attached to this report. The pipe riser in Room 208A has been repaired and the room is operational.

MH/pa Enc.

REWETTABLE FIBERGLASS LAGGING CLOTH

To cover insulated steam lines, boilers, and other high temperature equipment, Great Lakes Textiles offers a complete line of 100% asbestos-free woven fiberglass fabrics in the 4 to 12 oz./sq./yd. range. All are non-combustable and high in strength, and are available in a number of different finishes suitable for most engineering requirements.

SPECIFICATIONS:

Thread Count	20 v 14 v 20 0
THAKING (DADAYA) AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA	17.5
AULTONIESS	0 / O
Tensile-Warp	1040 + or ~ 10%
Fill	100
Weave	40
Weave	2 end plain
Width	40" or 60"

Fabric may be supplied with conventional selvages or feathered edge in conformance with MIL-C-20079F, Type 1, Class 6.

REWETTABLE FINISH

This cloth contains a rewettable adhesive impregnated into the body of the fabric. This finish is designed to reduce installation time and speed cleanup. The fabric is simply dipped into water to activate the adhesive, then applied directly to the pipe.
